Cloud Administration & Feature Walkthrough — Albrolosy Company

Administrative Capabilities Guide

Domain: `albrolosy.com`

🎛️ What Can You Manage & Control Through the Cloud Portal?

✉️ 1. Employee Email Accounts Management (Full Self-Service CRUD)

The portal provides complete independence to manage company email accounts without technical dependencies:

- **Instant Account Provisioning:** Click *"Create New Email"* to instantly provision a new mailbox (e.g. `info`, `sales`, `ahmed`) and allocate individual storage quotas.
- **Auto-Generated Strong Passwords:** A 1-click password generator instantly produces secure 16-character passwords containing symbols, letters, and numbers.
- **1-Click Employee Credential Share:** Upon account creation, click *"Copy Employee Share Message"* to copy a formatted text message ready to send via WhatsApp or SMS containing the employee's username, password, Webmail URL, and smartphone connection guides.
- **Individual Account PDF Cards:** Export an official individual PDF certificate for any specific employee detailing their login credentials and device setup parameters.
- **Instant Quota & Password Modification:** Reset passwords in real-time if an employee forgets theirs, or expand their individual storage limit on demand.
- **Mailbox Suspension & Deletion:** Suspend or remove inactive mailboxes upon employee departure to reclaim storage quotas immediately.

🔄 2. Smart Email Forwarders & Aliases

Route incoming emails efficiently without allocating mailbox storage:

- **Departmental & Role-Based Aliases:** Create public-facing aliases such as `contact@albrolosy.com` or `careers@albrolosy.com` that automatically forward all incoming messages directly to personal Gmail or management inboxes.
- **Multi-Destination Forwarding:** Forward incoming messages to multiple destination emails simultaneously with comma-separated routing.

📊 3. Live Quota & Cloud Storage Monitoring

Real-time visual telemetry to track resources and prevent disruptions:

- **Mailbox Consumption Gauge:** View active accounts created versus your 200-mailbox capacity.
- **Distributed Quota Monitoring:** Track cumulative storage allocated across all active mailboxes against your 500 GB total pool.
- **Actual File Disk Usage:** Real-time tracking of true disk utilization (in MB) reflecting stored emails and attachments on the server.

📑 4. Comprehensive Enterprise PDF Reports

Export a full census report of all company mailboxes in an official Moemen Team branded PDF document with a single click, ideal for management reviews, auditing, and corporate archival.

Device & App Integration Guide — Albrolosy Company

Standardized Connection Parameters
Host: `mail.albrolosy.com`

🌐 Universal Server Connection Parameters (Outlook, iPhone, Android, Thunderbird)

Protocol / Service	Server Hostname	Port	Encryption Type
Incoming Mail (IMAP) — Recommended	`mail.albrolosy.com`	`993`	**SSL / TLS** (Mandatory)
Outgoing Mail (SMTP)	`mail.albrolosy.com`	`465`	**SSL / TLS** (Mandatory)
Incoming Mail (POP3) — Optional	`mail.albrolosy.com`	`995`	**SSL / TLS** (Mandatory)
Webmail Direct Portal	`https://mail.albrolosy.com/`	`443 (HTTPS)`	Let's Encrypt Enterprise SSL

📱 Quick Smartphone Setup Walkthrough

🍎 Apple iPhone (Default Mail App)

1. Navigate to *Settings* > *Mail* > *Accounts*.
2. Tap *Add Account* > select **Other** > **Add Mail Account**.
3. Enter your Name, Full Email Address, and Password.
4. Set Incoming and Outgoing Hostname to `mail.albrolosy.com`. Username is your full email address.
5. Save to initiate immediate bidirectional synchronization.

🤖 Android Smartphones (Gmail App)

1. Open *Gmail* and tap your profile avatar in the upper right.
2. Select **Add another account** > choose **Other**.
3. Enter your full email address, then select **Personal (IMAP)**.
4. Enter your password and configure Server to `mail.albrolosy.com` with SSL/TLS security.
5. Confirm permissions to enable instant push notifications.

🛡️ Enterprise Security Protocols & SLA Commitment

The email infrastructure provisioned for Albrolosy Company adheres to globally recognized deliverability standards to maximize inbox placement and prevent spoofing:

✓ SPF & DKIM Hardened: Cryptographic digital signatures prove message authenticity and shield your domain from fraudulent impersonation.

✓ DMARC Policy Protection: Prevents phishing and guarantees recipient mail servers recognize legitimate Albrolosy communications.

✓ 256-bit SSL/TLS Transport: Complete end-to-end transport encryption safeguarding messages in transit from interception.

★ MOEMEN TEAM VERIFIED ★
